

Press Release

RailRunner Europe successfully certified to DIN EN ISO 9001:2015

[Hamburg, 28.11.2017] The Hamburg-based transport company RailRunner Europe meets the highest quality standards and receives the ISO certification according to DIN EN ISO 9001:2015.

ISO 9001 specifies the minimum requirements for a quality management system (QMS) that companies of any size must implement to meet customer demands and other product or service quality standards. The quality management standard ISO 9001 is the most widely used and most important standard in quality management both nationally and internationally. This standard establishes that all structures, processes and procedures in the company are subject to constant control and thus to a continuous improvement process (CIP) of the internal quality management system (QMS).

“Obtaining the certification emphasizes that RailRunner Europe lives up to the high-quality standards we place on our products and services and now also on the company’s internal processes. RailRunner stands for quality, reliability and high customer satisfaction.”, says Gerhard Oswald, Managing Director of RailRunner Europe GmbH.

For RailRunner Europe, the certification is an important step in convincing existing and potential customers of the quality of their own product portfolio.

About RailRunner Europe GmbH

The US-American holding company RailRunner N.A., Inc. founded RailRunner Europe GmbH in Hamburg in 2015. RailRunner Europe aims at introducing RailRunner’s unique technology in Europe in which semitrailers are loaded onto innovative bogies without having to rely on conventional terminals. After the certification, homologation, and approval for Europe, the European RailRunner rolling stock will be manufactured mainly in Europe.
